(54) Print data generation system and corresponding method for use with a printing system

(57) A system and corresponding method for selecting an appropriate printer or printers from among printers connected to a network to improve printing efficiency is provided. Upon receipt of a print command, a print data generation system issues a temporary print request to at least one of the printers, which in response issue acceptance information to the print data genera-

tion system. The print data generation system then issues a print processing information request to obtain print processing information from the printers. The print data generation system then selects a printer or printer based on the print processing information, and generates print data for printing by the selected printer or printers.

ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.

EP 98 30 4515

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
